## Install Prizm Aircraft Lighting During Your Next Service Event

Prizm® Aircraft Cabin Lighting was designed, engineered, and developed to create a cost-effective, app-based LED lighting solution for business aircraft cabins. Available for most aircraft, Prizm offers premium, configurable white cabin lighting with full-color capability installed in your airplane at a price that is competitive with basic white-only lighting options.

### Benefits to Installing Prizm Aircraft Lighting

- Can pay for itself in as little as five years\*
- Configure your aircraft lighting to your exact white light temperature needs
- Utilize custom created moods to transform the cabin ambiance during any phase of flight
- Further customize your in-flight experience with custom lighted cup-holders
- Interfaces with the current cabin management system and/or full app control
- Prizm is all new hardware, not a partial fix that keeps older failure prone hardware
- Enjoy peace of mind with the industry's leading warranty – three years!
- Industry-best lead times, averaging under 2 weeks
- Can be installed during a routine inspection event or interior refurbishment

\*Based on average light and midsize jet lighting maintenance costs

“We recently completed an extensive interior refurbishment on a late model GIV/SP. Visual balance, lighting design elements and functionality were critical to a successful project. The Prizm Team and the Installers listened to our desires and delivered a highly functional product that seamlessly integrates with the new cabin management system, while also providing for an alluring in-cabin experience that is infinitely relaxing. Without a doubt, the Prizm lighting system is the key element that brought this project to life.”

## What is Prizm Cabin Lighting?

Prizm® Aircraft Cabin Lighting is a fully configurable, premium white aircraft cabin lighting solution with full color capability. Prizm allows you to program the perfect white lighting for your cabin design: bright, cool white for a sophisticated, modern style; soft, warm white for a comfortable, cozy feel; or anything in-between. In addition, Prizm can be easily adapted to the phase of the flight to enhance passenger comfort, increase productivity, and reduce jet lag.

That's not all, Prizm also provides the option for full spectrum color lighting so you can set unlimited custom practical moods. All of this controlled by a simple button press or any carry on device.

## Custom Moods

Quickly and easily change the feel of your cabin and the entire in-flight experience.

The system allows for customer selectable preset lighting configurations. It has unlimited settings for different users or different objectives.

Need a quick setting for late-night flights? It can do that.

Need a setting to watch a movie? It can do that too.

Need a setting to adjust to your early morning flight before your big meeting? Prizm lighting can do that too.

## Fully Scalable For Any Size Aircraft

The Prizm lighting system is expandable to provide solutions for business aircraft from single-pilot jets to heavy transcontinental aircraft. The Prizm lighting system offers premium white lighting along with millions of colors and customizable preset mood settings.
